

On the Generalized Theory of Gravitation (Annotated)

An account of the newly published extension of the general theory of relativity against its historical and philosophical background

Albert Einstein *

Abstract. This article appeared in the April 1950 issue of the *Scientific American* magazine (Volume 182, No. 4). Reading it has been an indescribable joy. I decided to annotate it for my own benefit. Annotating is a form of note-taking for better understanding.
